WARNING

Due to the recent rise in popularity of MP3 players, it is reported that roughly 13% of children have some degree of hearing loss. According to a national poll commissioned by ASHA, 40% of students report setting their music player's volume too high. Most of this damage is due to the fact that the earphones purchased with portable CE devices do not do a good job of isolating outside sound. This can cause children to set their music player's volume too high, trying to eliminate outside distractions.
